

HANIF FAIQ

087881012700 | haniffaiq95@gmail.com | <https://www.linkedin.com/in/haniffaiq13/>
Jakarta, Indonesia

IT professional with 5+ years of experience across DevOps, backend engineering, automation, and data systems. I build reliable cloud and application platforms using AWS, GCP, Docker, CI/CD, Python, PostgreSQL, and monitoring stacks, with recent work scaling WhatsApp automation to 500K+ messages/month and delivering real-time telecom incident detection.

WORK EXPERIENCES

Huawei Indonesia - Jakarta, Indonesia | DevOps | Mar 2025 - Present

- WhatsApp Bot Rebuild: Redesigned and scaled a WhatsApp bot to handle 500,000+ messages/month, managing 100+ groups for automated reporting, notifications, and OTP-based authentication.
- Down Detector System: Developed and deployed a real-time down detector for three major telecom providers, including XL Smart, integrated with WhatsApp group notifications for incident alerts.
- Customer Application Support: Provided ongoing consultation, feature enhancements, and bug fixing for customer applications, ensuring stability and alignment with evolving business needs.

Elev8 - Swiss | DevOps Engineer | Dec 2024 - Mar 2025

- Set up and managed AWS environments for development and production with EC2, S3, and RDS.
- Configured CI/CD pipelines for backend and frontend services using Jenkins, GitLab CI, and AWS CodePipeline.
- Implemented zero-downtime deployments with ELB, Auto Scaling, and blue-green deployment patterns.
- Optimized Nginx configurations for load balancing, SSL termination, and reverse proxy routing.
- Containerized backend and frontend services using Docker for consistency across environments.
- Managed multi-container setups with Docker Compose for streamlined deployments.
- Integrated monitoring tools such as Prometheus and Grafana for performance tracking and alerting.
- Collaborated with teams and maintained documentation for deployment and infrastructure processes.

Wine Adore - Singapore | Senior Backend Engineer | Jul 2024 - Dec 2024

- Refactored 40+ API endpoints to improve performance, scalability, and security.
- Identified and addressed 3+ critical security issues through security post-mortem work, enhancing system integrity.
- Developed 50+ API endpoints to enable new features and robust application integrations.
- Integrated Zoho CRM with the company database using Google Cloud Functions, Pub/Sub, and Cloud Scheduler.
- Contributed to sprint planning and daily stand-ups to support timely feature delivery.

PT Astra Graphia Information Technology (AGIT) - Jakarta, Indonesia | Python Developer (Backend) | May 2023 - Dec 2024

- Developed Python-based RESTful APIs for seamless IoT device integration.
- Designed intuitive user interfaces using HTML and CSS for production process tracking.
- Administered PostgreSQL databases on client and AGIT servers, ensuring data integrity.
- Led deployments to production using Docker, Podman, and Azure, optimizing server performance.
- Created detailed documentation to support deployment, API usage, and system architecture.
- Assigned tasks and monitored progress to ensure efficient project delivery.
- Implemented DevOps practices on client servers to streamline deployment processes.

Prodigi Insurance - Jakarta, Indonesia | Data Engineer | Nov 2022 - May 2023

- Designed and redesigned data pipelines.
- Implemented Change Data Capture (CDC) patterns.
- Created ELT/ETL processes using GCP services.
- Handled Pub/Sub, Cloud Scheduler, and Cloud Storage.
- Worked with Google Cloud SQL and PostgreSQL.
- Leveraged BigQuery for data storage and analytics.
- Monitored latency in data updates and created documentation.
- Built data visualizations using Google Looker.

PT. Habibi Digital Nusantara (Habibi Garden) - Bandung, Indonesia | Junior Software Engineer | Apr 2020 - Aug 2022

- Conducted API testing for reliability and functionality.
- Created interactive dashboards for data visualization.
- Maintained and debugged APIs and websites.
- Managed databases for efficient data storage.
- Developed Telegram bots for enhanced functionality.
- Created mobile apps for an improved user experience.

PT. Habibi Digital Nusantara (Habibi Garden) - Bandung, Indonesia | Microservice Engineer Intern | Jan 2020 - Apr 2020

- Developed and implemented RESTful APIs.
- Conducted API testing for reliability and functionality.
- Created interactive dashboards for data visualization.
- Maintained and debugged APIs and websites.
- Managed databases for efficient data storage.
- Developed Telegram bots for enhanced functionality.
- Created mobile apps for an improved user experience.

Telkom Indonesia - Jakarta, Indonesia | Data Management Intern | Jul 2020 - Aug 2020

- Collected and validated data from various sources.
- Cleaned and organized data in structured databases.
- Used Excel, SQL, and Python for data analysis.
- Collaborated with team members on data-driven projects to enhance operational efficiency and decision-making.

EDUCATION LEVEL

Universitas Telkom - Bandung, Indonesia | Bachelor of Telecommunication Engineering | Aug 2018 - Sep 2022

Telkom School - Jakarta, Indonesia | High School Diploma in Telecommunication Transmission Engineering | Jun 2015 - Jun 2018

ORGANISATIONAL EXPERIENCE

Mozilla Indonesia - Jakarta, Indonesia | Volunteer | Mar 2018 - Mar 2023

- Acted as a keyholder for Mozilla Indonesia.
- Organized events, workshops, and community gatherings.
- Delivered presentations and speeches on Mozilla and open-source technology.
- Coordinated and managed logistics for community events.
- Assisted in organizing and executing community initiatives.

Antenna Laboratory Telkom University - Bandung, Indonesia | Antenna Research and Development Assistant | Feb 2019 - Jul 2022

- Assisted with research and development projects at the Antenna Laboratory, Universitas Telkom.
- Gained valuable experience in antenna technology.
- Contributed to antenna research and development projects.
- Collaborated with researchers and engineers on experiments, data collection, and analysis.
- Acquired hands-on experience in antenna design and testing.

HMTT (Himpunan Mahasiswa Teknik Telekomunikasi) - Bandung, Indonesia | Research and Development Team | Jun 2018 - Nov 2018

- Led the Research and Development team at HMTT.
- Directed telecommunications exploration and innovation projects.
- Spearheaded projects aimed at addressing real-world challenges, including an IoT solution for Margamukti Village in Pangalengan, West Java.
- Oversaw project planning, execution, implementation, stakeholder coordination, and team communication.

Electro Club SMK Telkom Jakarta - Jakarta, Indonesia | Leader | Aug 2016 - Aug 2017

- Led Electro Club at SMK Telkom Jakarta, a student organization centered on electronics and technology.
- Managed the club's activities, events, and projects.
- Provided guidance and mentorship to club members.
- Organized workshops, competitions, and educational initiatives.
- Fostered a collaborative and innovative environment within the club.

PROJECTS

Huawei WhatsApp Bot Rebuild and Down Detector System (2025)

Redesigned and scaled a WhatsApp bot to handle 500,000+ messages/month across 100+ groups, then developed a real-time down detector for major telecom providers with WhatsApp group incident notifications.

BaliBersih.com - On-demand Cleaning Service Platform (2025)

Built a mobile-first service platform for on-demand cleaning in Bali, with instant WhatsApp booking, dynamic pricing display, SEO-oriented service pages, and location-aware content. Link: <https://balibersih.com>

Mitrnesia.id - Franchise Marketplace Platform (2024)

Built an end-to-end marketplace for buying and selling local franchise businesses, including dynamic product listings, franchise package comparison, inquiry automation, a Python API backend, PostgreSQL persistence, Docker packaging, and AWS deployment. Link: <https://mitrnesia.id>

Elev8 AWS Infrastructure and CI/CD Automation (2024-2025)

Set up AWS environments, Dockerized backend and frontend services, configured CI/CD pipelines, optimized Nginx, implemented blue-green deployment patterns, and integrated Prometheus and Grafana monitoring.

Wine Adore API Refactor and Zoho CRM Integration (2024)

Refactored and developed 90+ API changes, addressed critical security issues, and integrated Zoho CRM using Google Cloud Functions, Pub/Sub, Cloud Scheduler, and database synchronization.

Industrial IoT Platform - AGIT and TELKOMSEL (2023)

Built platform features for connecting and managing industrial IoT devices, enabling teams to monitor, control, and analyze device data across distributed environments.

Grafana Monitoring Dashboard - AGIT and FINNET (2024)

Developed five Grafana Cloud dashboards for FINNET services using Dynatrace, Prometheus, and BigQuery. Built an Airflow/Python ETL pipeline integrating Oracle, MySQL, and PostgreSQL sources into BigQuery for near real-time analytics.

Dashboard Website for Monitoring Agriculture Sensor (2023)

Created a React.js dashboard for monitoring agricultural sensor data through MQTT, with real-time charts, gauges, maps, responsive design, and visualizations for temperature, humidity, soil moisture, and light intensity.

Machine Learning Classification System using EEG Signal Data (2023)

Classified alcoholic and non-alcoholic brain activity using EEG signal data, SVM, ANN, preprocessing, feature extraction, feature selection, model evaluation, and hyperparameter tuning.

Hardware Error Checking Microservice (2020)

Built a Python-based microservice integrated with a Telegram bot to monitor battery and storage device health, provide real-time notifications, run scheduled checks, and log hardware conditions.

Telegram Bot for Hardware Device Monitoring (2020)

Created a Telegram bot that provides real-time updates on battery, storage, and hardware component conditions so users can stay informed about device health.

Milk pH Monitor for Margamukti Village, Bandung, Indonesia (2018)

Developed an Arduino-based monitoring system for testing the pH level of locally produced milk in Bandung, supporting quality and safety checks for community milk products.

SmardenBot V1 (IoT Project) (2017)

Built an Arduino Uno robotic system for automated plant watering, reducing manual workload and ensuring plants receive water promptly and in appropriate amounts.
