

HANIF FAIQ

087881012700 | haniffaiq95@gmail.com | <https://www.linkedin.com/in/haniffaiq13/>

Jakarta, Indonesia

Experienced and versatile IT professional with a background in frontend, backend, and data engineering. Skilled in developing and deploying applications using a variety of technologies, including React.js, Node.js, Python, PostgreSQL and MongoDB. Proven track record of successfully delivering projects, such as creating features for IoT device monitoring systems and developing data pipelines for consolidating multiple data sources. Strong collaboration skills, demonstrated through effective teamwork with cross-functional teams and clients to achieve project goals. Passionate about learning and adapting to new technologies, with a focus on continuous improvement and delivering high-quality solutions. Committed to personal growth and always seeking new knowledge to better assist the team in problem-solving

Work Experiences

Huawei Indonesia - Jakarta, Indonesia

Mar 2025 - Present

DevOps

- WhatsApp Bot Rebuild: Redesigned and scaled a WhatsApp bot to handle 500,000+ messages/month, managing 100+ groups for automated reporting, notifications, and OTP-based authentication.
- Down Detector System: Developed and deployed a real-time down detector for three major telecom providers (including XL Smart), integrated with WhatsApp group notifications for incident alerts.
- Customer Application Support: Provided ongoing consultation, feature enhancements, and bug fixing for customer applications, ensuring stability and alignment with evolving business needs.

Elev8 - Swiss

Dec 2024 - Mar 2025

DevOps Engineer

- Set up and managed AWS environments (dev & prod) with EC2, S3, and RDS. Configured CI/CD pipelines for backend and frontend using Jenkins, GitLab CI, or AWS CodePipeline. Implemented zero-downtime deployments with ELB, Auto Scaling, and Blue-Green deployment. Optimized Nginx configurations for load balancing, SSL termination, and reverse proxy. Containerized backend and frontend services using Docker for consistency across environments. Managed multi-container setups with Docker Compose for streamlined deployments. Integrated monitoring tools (e.g., Prometheus, Grafana) for performance tracking and alerting. Collaborated with teams and maintained documentation for deployment and infrastructure processes.

Wine Adore - Singapore

Jul 2024 - Dec 2024

Senior Backend Engineer

- Refactored 40+ API Endpoints: Improved performance, scalability, and security. Security Post-Mortem: Identified and addressed 3+ critical security issues, enhancing system integrity. Developed 50+ API Endpoints: Enabled new features and robust integrations for the app. Zoho CRM Integration: Integrated Zoho CRM with company DB using GCP (Cloud Functions, Pub/Sub, Cloud Scheduler). Agile Development: Contributed to sprint planning and daily stand-ups, ensuring timely feature delivery.

PT Astra Graphia Information Technology (AGIT) - Jakarta, Indonesia

May 2023 - Dec 2024

Python Developer (Backend)

- Developed RESTful APIs: Built Python-based REST APIs for seamless IoT device integration.
- UI Design: Designed intuitive user interfaces using HTML & CSS for production process tracking.
- Database Management: Administered PostgreSQL databases on client and AGIT servers, ensuring data integrity.
- Deployment Management: Led deployment to production using Docker, Podman, and Azure, optimizing server performance.
- Technical Documentation: Created detailed documentation to support deployment, API usage, and system architecture.
- Team Leadership: Assigned tasks and monitored progress to ensure efficient project delivery.
- DevOps Practices: Implemented DevOps practices on client servers to streamline deployment processes.

Prodigi Insurance - Jakarta, Indonesia

Nov 2022 - May 2023

Data Engineer

- Designing and redesigning data pipelines
- Implementing Change Data Capture (CDC)
- Creating ELT/ETL processes using GCP services
- Handling Pub/Sub, Cloud Scheduler, and Cloud Storage
- Working with Google Cloud SQL and PostgreSQL
- Leveraging BigQuery for data storage and analytics
- Monitoring latency in data updates
- Creating documentation
- Data visualization using Google Looker

PT. Habibi Digital Nusantara (Habibi Garden) - Bandung, Indonesia

Jan 2020 - Apr 2020

Microservice Engineer Intern

- Developing and implementing Restful APIs
- Conducting API testing for reliability and functionality
- Creating interactive dashboards for data visualization
- Maintaining and debugging APIs and websites
- Managing databases for efficient data storage
- Developing Telegram bots for enhanced functionality
- Creating mobile apps for an improved user experience.

PT. Habibi Digital Nusantara (Habibi Garden) - Bandung, Indonesia

Apr 2020 - Aug 2022

Junior Software Engineer

- Conducting API testing for reliability and functionality
- Creating interactive dashboards for data visualization
- Maintaining and debugging APIs and websites
- Managing databases for efficient data storage
- Developing Telegram bots for enhanced functionality
- Creating mobile apps for an improved user experience.

Telkom Indonesia - Jakarta, Indonesia

Jul 2020 - Aug 2020

Data Management Intern

- Collecting and validating data from various sources.
- Cleaning and organizing data in structured databases.
- Utilizing tools like Excel, SQL, and Python for data analysis.
- Collaborating with team members on data-driven projects to enhance operational efficiency and decision-making.

Education Level

Universitas Telkom - Bandung, Indonesia

Aug 2018 - Sep 2022

Bachelor of Telecommunication Engineering

Telkom School - Jakarta, Indonesia

Jun 2015 - Jun 2018

High School Diploma in Telecommunication Transmission Engineering

Organisational Experience

Mozilla Indonesia - Jakarta, Indonesia

Mar 2018 - Mar 2023

Volunteer

- Acted as a keyholder for Mozilla Indonesia.
- Organized events, workshops, and community gatherings.
- Delivered presentations and speeches on Mozilla and open-source tech.
- Coordinated and managed logistics for community events.
- Assisted in organizing and executing community initiatives.

Antenna Laboratory Telkom University - Bandung, Indonesia

Feb 2019 - Jul 2022

Antenna Research and Development Assistant

- Assisted with research and development projects at the Antenna Laboratory, Universitas Telkom.
- Gained valuable experience in antenna technology.
- Contributed to various aspects of antenna research and development.
- Collaborated with researchers and engineers on projects.
- Participated in experiments, data collection, and analysis.
- Acquired hands-on experience in antenna design and testing.

HMTT (Himpunan Mahasiswa Teknik Telekomunikasi) - Bandung, Indonesia

Jun 2018 - Nov 2018

Research And Development Team

- Led the Research and Development (R&D) Team at HMTT (Himpunan Mahasiswa Teknik Telekomunikasi).
- Directed a team focused on telecommunications exploration and innovation.
- Spearheaded projects aimed at addressing real-world challenges.
- Notably developed an IoT solution for Margamukti Village in Pengalengan, West Java.
- Oversaw project planning, execution, and implementation.
- Facilitated collaboration and communication within the team.
- Coordinated with stakeholders to ensure project success.
- Acquired extensive leadership and project management skills.

Leader

- Led Electro Club at SMK Telkom Jakarta, a student organization centered on electronics and technology.
- Managed the club's activities, events, and projects.
- Provided guidance and mentorship to club members.
- Organized workshops, competitions, and educational initiatives.
- Fostered a collaborative and innovative environment within the club.
- Developed leadership and organizational skills through hands-on experience.
- Cultivated teamwork and communication among club members.

Projects

- **SmardenBot V1 (IoT Project)** (2017): The "Smardenbot" project is an initiative to create an automated robotic system for plant watering utilizing the Arduino Uno microcontroller. With Smardenbot, the main objective is to automate the plant watering process, thus reducing human workload and ensuring plants receive water promptly and in appropriate amounts.
- **Milk Ph Monitor for Margamukti Village, Bnadung, indonesia** (2018): The "Milk pH Monitor" project for Margamukti Village, Bandung, aims to develop a monitoring system for testing the pH level of milk produced locally. This project is essential for ensuring the quality and safety of milk products consumed by the community
- **Microservice for Error Hardware Checking** (2020): The "Error Hardware Checking Microservice" for Habibi Garden is a Python-based system integrated with a Telegram bot. It monitors battery and storage device statuses in the garden. Users receive real-time notifications via the bot about any hardware errors detected, enabling timely maintenance. Scheduled checks and logging ensure proactive monitoring and data-driven optimization of garden equipment.
- **Telegram bot for Checking All Hardware device and Last Condition**: The Telegram bot for checking all hardware devices and their last condition provides users with real-time updates on the status of various hardware components. Users can interact with the bot to receive information about the current status of batteries, storage devices, and other hardware in the system. This bot enables users to stay informed about the health and condition of their hardware
- **Machine Learning (Classification Alcoholic and Non Alcoholic Brain using EEG signal data)** (2023): The project involves utilizing EEG signal data to classify brain activity into alcoholic and non-alcoholic categories using Support Vector Machine (SVM) and Artificial Neural Network (ANN) algorithms. Initially, EEG data is collected from both alcoholic and non-alcoholic individuals. This data undergoes preprocessing to extract relevant features representing brain activity, followed by feature selection to improve classification accuracy. SVM and ANN models are then trained on the selected features using labeled data. These models are evaluated using test datasets, and hyperparameters are tuned for optimal performance. Ultimately, the trained models are deployed for real-world classification of new EEG signals, offering insights into alcohol-related brain patterns and potential applications in healthcare and addiction treatment.
- **Dashboard Website for Monitoring Agriculture Sensor** (2023): The project involves creating a dashboard website for monitoring agricultural sensor data using React.js and MQTT protocol. React.js, a JavaScript library for building user interfaces, will be used for frontend development, ensuring efficient and modular development. MQTT protocol facilitates real-time data streaming from sensors to the dashboard. The dashboard will display various sensor parameters such as temperature, humidity, soil moisture, and light intensity. It will feature components like graphs, charts, gauges, and maps to visualize data trends and sensor locations. Responsive design will ensure optimal viewing across devices.
- **Industrial IoT platform - AGIT and TELKOMSEL** (2023): The Industrial IoT platform is the main project I've been involved in at AGIT. This platform is designed to connect and manage various IoT devices in industrial environments. With this platform, companies can efficiently monitor, control, and analyze data from these devices.
- **Single Dashboard Monitoring Gradana - AGIT and FINNET** (2024): Developed 5 Grafana Cloud dashboards for FINNET services (FINNET Money, 2 Voucher, Billing, Payment) to monitor system performance using data from Dynatrace, Prometheus, and BigQuery. Built an ETL pipeline with Airflow and Python to transfer data from Oracle, MySQL, and PostgreSQL into BigQuery, ensuring seamless data integration and real-time analytics for improved decision-making and monitoring.
